

FOODFAIR

Artificial Intelligence Solutions

In the project **FOODFAIR**, SLA develops comprehensive AI solutions for the use along the entire value chain. The first product resulting is the **CLASSIFAI® BOX** [with an integrated camera], which is already successfully used in different departments, e.g. in:

iBOX WASHING AND IDENTIFICATION

For an **automated identification** of dirt or sticker residues in and on the iBoxes. The RFID chips integrated in the iBox also enable the AI to know at all times where which box with which contents is located.

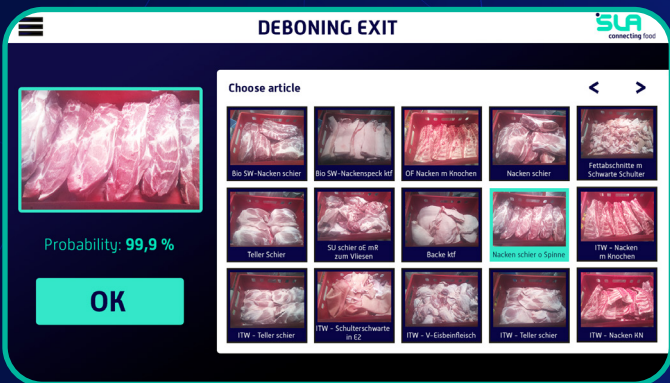

PRODUCT IDENTIFICATION

For an **automated identification** of the right item and the right quality to support an optimal sorting

PRODUCTION PLANNING

Here, AI creates **predictive forecasts** of the production volume (incl. the necessary personnel, material and machine requirements), based on historical data and other influences such as weather, public holidays or events, etc.
